

# VIRTUAL REALITY IMMERSIVE TRAINING

Amerisure's virtual reality training creates a realistic, exciting environment to bring employees into critical safety moments to learn and experience without risk. Users can augment classroom training with powerful scenarios and experience the consequences of safety choices.

Virtual reality training reinforces classroom learning and engages users with memorable content experienced in a safe setting. This helps minimize disruption to work and resources while improving retention and recall of training.

## PROGRAM FEATURES

Virtual reality technology provides downloadable training content within a cloud-based platform. Training includes industry-specific simulation scenarios for high hazard and severity exposures, including fall prevention, ladder safety and confined space entry.

- ▶ Headsets allow employees to apply learned skills safely as an interim step to the real world
- ▶ Avoid common workplace injuries with individual scenario training in a virtual world
- ▶ Virtual gameplay can be broadcast live in class to share successes and learnings
- ▶ Amerisure risk management consultants support with demonstrations and setup
- ▶ Improves knowledge retention in critical safety procedures to reduce costly losses

For more information on virtual reality training, contact your risk management consultant.
